

# JCommerce E-invoice Server

## *Electronic invoicing from application to application*

### E-INVOICING BENEFITS

The advantages of E-invoicing are plenty: electronic invoicing not only dramatically reduces costs, it also pumps up your administrative efficiency.

- Up to 75% cost savings
- Error-free data exchange
- Faster invoice processing
- Improved debtor control
- Direct back-end integration
- Automatic invoice validation

E-invoicing is about automating the invoice business process and efficiently exchanging invoice data between applications. Only if manual intervention is no longer necessary and invoice information can flow freely from one company's application into the other, E-invoicing becomes reality, and rapidly creates tremendous ROI.

That's exactly why Aditel has created the JCommerce E-invoice Server: to open up your back-end applications so you can exchange invoice information with your trading partners and you can cut costs. That's right: automating the invoicing process dramatically reduces costs. In an average company, these savings can rise up to 75% per invoice. For a maximized ROI, invoice data have to be integrated automatically – without human intervention - in back-office systems like financial software or ERP systems. Result: less mistakes, better data quality, efficient invoice processing and faster payments.

### Overcome E-invoice complexity

E-invoicing implies a full range of functionalities, like creating, sending, receiving, viewing, printing, importing, exporting and archiving electronic

invoices. When it comes to integrating electronic invoices into back-office systems, problems occur due to the use of multiple data formats, network protocols and applications. These integration problems risk to become far more complex to manage since they are localized between different companies, each using different technology. Aditel's JCommerce E-invoice Server overcomes B2B complexity in the invoicing field, and offers you a flexible environment to efficiently automate and integrate invoicing information flows into your business processes.

### Tools & services

The JCommerce E-invoice Server provides you with all the configuration and monitoring tools you need to exchange invoices automatically and legally with trading partners, and rapidly integrate them in back-office applications. The E-archive tool automatically creates E-

## Cut your invoice costs by up to 75%. With the JCommerce E-invoice Server.

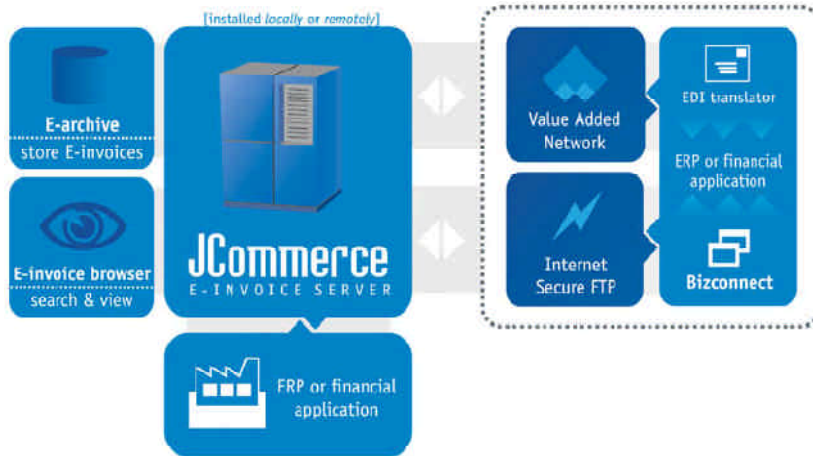

invoice archives and stores them in a secure location for future reference. The E-invoice Browser allows you to efficiently search through E-invoice archives, easily retrieve stored electronic invoices, and rapidly visualize them in a web browser, using the business view of your choice.

### Business scenario's

JCommerce's flexible and modular architecture lets you respond to the need for distributed information exchange. The JCommerce E-invoice Server can be installed locally or remotely, in a securely hosted datacenter, and can easily be scaled to

adapt to business growth. In order to make your E-invoicing projects as successful as possible, Aditel offers you its knowledge and proven business expertise in the field of electronic invoicing, XML, EDI, and application integration with various back-end systems and platforms. Aditel experts also advice you with all legal and administrative issues involving electronic invoicing.

All this makes the JCommerce E-invoice Server the solution of choice and Aditel your partner of choice when it comes to successfully automating and integrating invoice information flows with your trading partners.

### Tools for E-invoicing

JCommerce E-invoice tools comply with *all* legal requirements concerning E-invoicing:

- **Xschema Mapper** provides the technical framework to rapidly implement the BMF100 and CONTRL messages and easily adapt to possible upgrades.
- **E-invoice Browser** provides a single point of entry to search, retrieve and visualize messages and their status, accessible over the Internet
- **E-archive** provide a reference table, basic and advanced invoice search functionality, and a completely customizable business view

### Platforms for E-invoicing

JCommerce E-invoice Server runs on a variety of operating systems:

- Microsoft Windows NT 4
- Microsoft Windows 2000
- Sun Solaris Intel 8
- Sun Solaris Sparc 8
- IBM AIX 4.3.3
